

Cover Letter

Dear Hiring Manager,

I am writing to express my interest in junior and graduate-level software engineering roles. I recently completed the Software Engineering Immersive program at General Assembly, where I gained hands-on experience in full-stack development, including JavaScript, React, Node.js, Python, and Django. Completing this intensive program has strengthened my passion for technology and inspired me to return fully to the software engineering field to build my long-term career.

Although I bring over a decade of experience in technical operations, IT systems, and troubleshooting, my focus now is on leveraging my newly gained software engineering skills to grow in a modern development environment. I am highly motivated, flexible, and committed to continuous learning. I thrive in collaborative settings and enjoy taking on new challenges that help me sharpen my problem-solving and coding abilities.

I am actively seeking opportunities that do not require prior professional software engineering experience but value enthusiasm, adaptability, and strong technical foundations. I am ready to contribute from day one while learning from experienced engineers and evolving into a confident and effective developer.

Thank you for considering my application. I would welcome the opportunity to discuss how my recent training, motivation, and desire to grow can make me a strong fit for your team.

Kind regards,

Qudratullah Khurram
